#### **DETAILED ACTION**

## Information Disclosure Statement

1. The information disclosure statements filed 1/18/2 and 12/9/2 fails to comply with 37 CFR 1.98(a)(3) because it does not include a concise explanation of the relevance, as it is presently understood by the individual designated in 37 CFR 1.56(c) most knowledgeable about the content of the information, of each patent listed that is not in the English language. It has been placed in the application file, but the information referred to therein has not been considered.

#### **Drawings**

2. The proposed drawing correction and/or the proposed substitute sheets of drawings, filed on 12/9/2002 have been approved. A proper drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The correction to the drawings will not be held in abeyance.

### Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 09/830,048

Art Unit: 3671

4. Claims 1-3, 5, 6, and 8-10 rejected under 35 U.S.C. 103(a) as being unpatentable over Kuhl (U.S. Patent 5,407,295) in view of Blanton, Jr. (U.S. Patent 581,476). Kuhl discloses the telescoping tubular members (2, 3) having the press applying and receiving surfaces (5, 6, 7, 8) and disposed in a rotational relationship (Figures 1 and 2, for example). Kuhl does not specify the curve to be involute. Blanton, Jr. teaches using involute curved surfaces on tubular members. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have used the involute structure of Blanton, Jr. with the surfaces of Kuhl in order to obtain a desired fit, as taught by Blanton, Jr.

There are a plurality of press applying and receiving surfaces.

There are step and catch portions (Figure 1, for example).

The structure of Kuhl (Figure 10, for example) meets the recitations regarding the receiving/catch structure.

5. Claims 11-18 rejected under 35 U.S.C. 103(a) as being unpatentable over Kuhl and Blanton, Jr., as applied above, and further in view of Gaynor (U.S. Patent 5,003,328). Kuhl does not teach tripods; however, tripods having telescoping members are common, as exemplified by Gaynor. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have used the assemblies of Kuhl/Blanton, Jr. with the legs of Gaynor in order to obtain quick deployment, in accordance with the invention of Kuhl.

#### Response to Arguments

6. Applicant's arguments filed 4/28/3 have been considered but are most in view of the new ground(s) of rejection.

Art Unit: 3671

Conclusion

Any inquiry concerning this communication or earlier communications from the 7. examiner should be directed to Gary Hartmann whose telephone number is 703-305-4549. The

examiner can normally be reached on Monday through Friday, 9am-6pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Thomas Will can be reached on 703-308-3870. The fax phone numbers for the

organization where this application or proceeding is assigned are 703-305-3597 for regular

communications and 703-305-3597 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding

should be directed to the receptionist whose telephone number is 703-308-1113.

June 9, 2003

Gary Hartmann **Primary Examiner**
